

personal payment system

The Personal Payment System enables patrons to pay fines and any associated fees during check-out using a variety of payment methods.

Key Features

- Integrates easily with existing library check-out counters
- Easy access to the large capacity receipt printer and coin collector
- Ability to read key fob style library cards
- Features credit/debit card swipe, bill acceptor, and coin acceptor with change return
- Compatible with all of Tech Logic's software, including CircIT

Less Maintenance

Patrons place their library cards on the glass and the system reads the barcode on the library card. Since patrons do not place their cards in a machine, there are fewer moving parts to maintain, and the imager eliminates the problem of cards becoming jammed in the card reader.

Easy to Use

The check-out software notifies a patron if they have fines or associated fees, and the patron can pay the fine using cash, coins, or credit cards. Your library can associate the patron's library card with an account on the library's server.

Easy Integration

Tech Logic's Personal Payment System can be flush-mounted into library's check-out counter.

Easy Receipt Printer Access

Receipt printer and coin collector access is easy. Two locks on top of the Personal Payment System open the unit and the gas springs slowly lift the unit above the countertop. The operator can now change receipt paper or empty the coin collector while working at a comfortable ergonomic height.
